**THE  
PETKAU EFFECT**  
1992, cloth,  
out of print

Ralph Graeub's „PETKAU EFFECT“ shows - in a generally intelligible kind of description - the correlations between low radioactive emissions by atomic bomb tests as well as nuclear facilities - and:

„The Petkau Effect‘ is probably one of the most important publications in our century.“

(Dr. Peter Wydler, *Vierteljahresschrift der Naturforschenden Gesellschaft, Zürich, Vol. March, 1986*)

- defects of the immune system (also Aids)
- cancer/Leukemia
- increase of baby mortality
- increase of children with low birth-weight
- increase of total mortality
- decrease of intelligence
- increase of crime rates
- forest damages

After Chernobyl the Petkau effect respectively the high efficiency of free radicals at low dose levels and dose-rates is not only established in vitro but also in living organisms, especially also by Russian scientists (Burlakova). Burlakova is the scientific editor of the Russian edition of Ralph Graeub's „The Petkau Effect“.
